Description

This is a circa 2015 server enclosure and motherboard. The case model number is an Intel P4304XXMUXX and the motherboard is an Intel S2600CW. The server has 16 hot-swappable drive bays, room for up to 1 TB memory and room for two E5-V4 2000-class Intel CPUs. Refurbished and new CPUs for this box are available in the \$1000 range (20+ cores each), so someone could build it into a pretty reasonable server for not much money. It has never been used.
