# SBS 1.1-COMPLIANT GAS GAUGE AND PROTECTION ENABLED WITH IMPEDANCE TRACKTM <br> Check for Samples: bq20z65-R1 

## FEATURES

- Next Generation Patented Impedance Track ${ }^{\text {TM }}$ Technology Accurately Measures Available Charge in Li-lon and Li-Polymer Batteries
- Better Than 1\% Error Over the Lifetime of the Battery
- Supports the Smart Battery Specification SBS V1.1
- Flexible Configuration for 2 to $\mathbf{4}$ Series Li-lon and Li-Polymer Cells
- Powerful 8-Bit RISC CPU With Ultralow Power Modes
- Full Array of Programmable Protection Features
- Voltage, Current, and Temperature
- Satisfies JEITA Guidelines
- Added Flexibility to Handle More Complex Charging Profiles
- Lifetime Data Logging
- Drives 3, 4, and 5 Segment LED Display for Battery-Pack Conditions
- Supports SHA-1 Authentication
- Complete Battery Protection and Gas Gauge Solution in One Package
- Available in a 44-Pin TSSOP (DBT) package

## APPLICATIONS

- Notebook PCs
- Medical and Test Equipment
- Portable Instrumentation

## DESCRIPTION

The bq20z65-R1 SBS-compliant gas gauge and protection IC, incorporating patented Impedance Track ${ }^{\text {™ }}$ technology, is a single IC solution designed for battery-pack or in-system installation. The bq20z65-R1 measures and maintains an accurate record of available charge in Li-ion or Li-polymer batteries using its integrated high-performance analog peripherals. The bq20z65-R1 monitors capacity change, battery impedance, open-circuit voltage, and other critical parameters of the battery pack which reports the information to the system host controller over a serial-communication bus. Together with the integrated analog front-end (AFE) short-circuit and overload protection, the bq20z65-R1 maximizes functionality and safety while minimizing external component count, cost, and size in smart battery circuits.
The implemented Impedance Track $^{\text {TM }}$ gas gauging technology continuously analyzes the battery impedance, resulting in superior gas-gauging accuracy. This enables remaining capacity to be calculated with discharge rate, temperature, and cell aging all accounted for during each stage of every cycle with high accuracy.

Table 1. AVAILABLE OPTIONS

| $\mathbf{T}_{\mathbf{A}}$ | PACKAGE $^{(1)}$ |  |
| :---: | :---: | :---: |
|  | 44-PIN TSSOP (DBT) Tube | 44-PIN TSSOP (DBT) Tape and Reel |
| $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ | bq20z65-R1DBT ${ }^{(2)}$ | bq20z65-R1DBTR ${ }^{(3)}$ |

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at www.ti.com.
(2) A single tube quantity is 40 units.
(3) A single reel quantity is 2000 units

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

## TERMINAL FUNCTIONS

| TERMINAL |  | $\mathrm{I} / \mathrm{O}^{(1)}$ | DESCRIPTION |
| :---: | :---: | :---: | :---: |
| NO. | NAME |  |  |
| 1 | DSG | 0 | High side N-chan discharge FET gate drive |
| 2 | PACK | IA, P | Battery pack input voltage sense input. It also serves as device wake up when device is in shutdown mode. |
| 3 | VCC | P | Positive device supply input. Connect to the center connection of the CHG FET and DSG FET to ensure device supply either from battery stack or battery pack input |
| 4 | ZVCHG | O | P-chan pre-charge FET gate drive |
| 5 | GPOD | OD | High voltage general purpose open drain output. Can be configured to be used in pre-charge condition |
| 6 | PMS | I | Pre-charge mode setting input. Connect to PACK to enable 0v pre-charge using charge FET connected at CHG pin. Connect to VSS to disable OV pre-charge using charge FET connected at CHG pin. |
| 7 | VSS | P | Negative supply voltage input. Connect all VSS pins together for operation of device |
| 8 | REG33 | P | 3.3 V regulator output. Connect at least a $2.2 \mu \mathrm{~F}$ capacitor to REG33 and VSS |
| 9 | TOUT | P | Thermistor bias supply output |
| 10 | VCELL+ | - | Internal cell voltage multiplexer and amplifier output. Connect a $0.1 \mu \mathrm{~F}$ capacitor to VCELL+ and VSS |
| 11 | $\overline{\text { ALERT }}$ | OD | Alert output. In case of short circuit condition, overload condition and watchdog time out this pin will be triggered. |
| 12 | NC | - | Not used - leave floating |
| 13 | TS1 | IA | $1^{\text {st }}$ Thermistor voltage input connection to monitor temperature |
| 14 | TS2 | IA | $2^{\text {nd }}$ Thermistor voltage input connection to monitor temperature |
| 15 | $\overline{\text { PRES }}$ | I | Active low input to sense system insertion. Typically requires additional ESD protection. |
| 16 | $\overline{\text { PFIN }}$ | 1 | Active low input to detect secondary protector status, and to allow the bq20z65-R1 to report the status of the $2^{\text {nd }}$ level protection input. |
| 17 | SAFE | OD | Active high output to enforce additional level of safety protection; e.g., fuse blow. |
| 18 | SMBD | I/OD | SMBus data open-drain bidirectional pin used to transfer address and data to and from the bq20z65-R1 |
| 19 | NC | - | Not used - leave floating |
| 20 | SMBC | I/OD | SMBus clock open-drain bidirectional pin used to clock the data transfer to and from the bq20z65-R1 |
| 21 | $\overline{\text { DISP }}$ | I | Display control for the LEDs. This pin is typically connected to VCC via a $100 \mathrm{k} \Omega$ resistor and a push button switch connected to VSS. |
| 22 | VSS | P | Negative supply voltage input. Connect all VSS pins together for operation of device |
| 23 | LED1 | I | LED1 display segment that drives an external LED depending on the firmware configuration |
| 24 | LED2 | 1 | LED2 display segment that drives an external LED depending on the firmware configuration |
| 25 | LED3 | I | LED3 display segment that drives an external LED depending on the firmware configuration |
| 26 | LED4 | 1 | LED4 display segment that drives an external LED depending on the firmware configuration |
| 27 | LED5 | I | LED5 display segment that drives an external LED depending on the firmware configuration |
| 28 | GSRP | IA | Coulomb counter differential input. Connect to one side of the sense resistor |
| 29 | GSRN | IA | Coulomb counter differential input. Connect to one side of the sense resistor |
| 30 | $\overline{\text { MRST }}$ | I | Master reset input that forces the device into reset when held low. Must be held high for normal operation. Connect to RESET for correct operation of device |
| 31 | VSS | P | Negative supply voltage input. Connect all VSS pins together for operation of device |
| 32 | REG25 | P | 2.5V regulator output. Connect at least a 1 mF capacitor to REG25 and VSS |
| 33 | RBI | P | RAM / Register backup input. Connect a capacitor to this pin and VSS to protect loss of RAM / Register data in case of short circuit condition. |
| 34 | VSS | P | Negative supply voltage input. Connect all VSS pins together for operation of device |
| 35 | RESET | O | Reset output. Connect to MSRT. |
| 36 | ASRN | IA | Short circuit and overload detection differential input. Connect to sense resistor |
| 37 | ASRP | IA | Short circuit and overload detection differential input. Connect to sense resistor |

(1) $\mathrm{I}=$ Input, $\mathrm{IA}=$ Analog input, $\mathrm{I} / \mathrm{O}=$ Input/output, $\mathrm{I} / \mathrm{OD}=\operatorname{Input} /$ Open-drain output, $\mathrm{O}=\mathrm{Output}, \mathrm{OA}=$ Analog output, $\mathrm{P}=\mathrm{Power}$

TERMINAL FUNCTIONS (continued)

| TERMINAL |  | $1 / 0^{(1)}$ | DESCRIPTION |
| :---: | :---: | :---: | :---: |
| NO. | NAME |  |  |
| 38 | VC5 | IA, P | Cell votage sense input and cell balancing input for the negative voltage of the bottom cell in cell stack. |
| 39 | VC4 | IA, P | Cell votage sense input and cell balancing input for the positive voltage of the bottom cell and the negative voltage of the second lowest cell in cell stack. |
| 40 | VC3 | IA, P | Cell voltage sense input and cell balancing input for the positive voltage of the second lowest cell in cell stack and the negative voltage of the second highest cell in 4 cell applications. |
| 41 | VC2 | IA, P | Cell voltage sense input and cell balancing input for the positive voltage of the second highest cell and the negative voltage of the highest cell in 4 cell applications. Connect to VC3 in 2 cell stack applications. |
| 42 | VC1 | IA, P | Cell voltage sense input and cell balancing input for the positive voltage of the highest cell in cell stack in 4 cell applications. Connect to VC2 in 3 or 2 cell stack applications. |
| 43 | BAT | I, P | Battery stack voltage sense input. |
| 44 | CHG | O | High side N-channel charge FET gate drive |

## ABSOLUTE MAXIMUM RATINGS

Over operating free-air temperature (unless otherwise noted) ${ }^{(1)}$

|  | PIN | UNIT |
| :---: | :---: | :---: |
| Supply voltage range | BAT, VCC | -0.3 V to 34 V |
|  | PACK, PMS | -0.3 V to 34 V |
|  | $\mathrm{VC}(\mathrm{n})-\mathrm{VC}(\mathrm{n}+1) ; \mathrm{n}=1,2,3,4$ | -0.3 V to 8.5 V |
|  | VC1, VC2, VC3, VC4 | -0.3 V to 34 V |
|  | VC5 | -0.3 V to 1 V |
| Input voltage range | $\overline{\text { PFIN }}$, SMBD, SMBC. LED1, LED2, LED3, LED4, LED5, DISP | -0.3 V to 6 V |
|  | TS1, TS2, SAFE, VCELL+, $\overline{\text { PRES }}$, $\overline{\text { ALERT }}$ | -0.3 V to $\mathrm{V}_{(\text {REG25 })}+0.3 \mathrm{~V}$ |
|  | $\overline{\text { MRST, GSRN, GSRP, RBI }}$ | -0.3 V to $\mathrm{V}_{(\text {REG25 })}+0.3 \mathrm{~V}$ |
|  | ASRN, ASRP | -1 V to 1 V |
| Output voltage range | DSG, CHG, GPOD | -0.3 V to 34 V |
|  | ZVCHG | -0.3 V to $\mathrm{V}_{\text {(BAT) }}$ |
|  | TOUT, ALERT, REG33 | -0.3 V to 6 V |
|  | RESET | -0.3 V to 7 V |
|  | REG25 | -0.3 V to 2.75 V |
| ISS Maximum combined sink current for input pins | PRES, $\overline{\text { PFIN, }}$, SMBD, SMBC, LED1, LED2, LED3, LED4, LED5 | 50 mA |
| $\mathrm{T}_{\mathrm{A}} \quad$ Operating free-air temperature range |  | $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ |
| $\mathrm{T}_{\mathrm{F}} \quad$ Functional temperature |  | $-40^{\circ} \mathrm{C}$ to $100^{\circ} \mathrm{C}$ |
| $\mathrm{T}_{\text {stg }} \quad$ Storage temperature range |  | $-65^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$ |

(1) Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## RECOMMENDED OPERATING CONDITIONS

Over operating free-air temperature range (unless otherwise noted)

|  | PIN | MIN | NOM | MAX |
| :--- | :--- | ---: | ---: | :---: |
| UNIT |  |  |  |  |
| $V_{\text {SS }}$ | Supply voltage | VCC, BAT | 4.5 | 25 |
| $V_{\text {(STARTUP) }}$ | Minimum startup voltage | VCC, BAT, PACK | 5.5 |  |

SLUS990 -DECEMBER 2009
www.ti.com

## RECOMMENDED OPERATING CONDITIONS (continued)

Over operating free-air temperature range (unless otherwise noted)

|  |  | PIN | MIN | NOM MAX | UNIT |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{V}_{\text {IN }}$ | Input voltage range | $\mathrm{VC}(\mathrm{n})-\mathrm{VC}(\mathrm{n}+1) ; \mathrm{n}=1,2,3,4$ | 0 | 5 | V |
|  |  | VC1, VC2, VC3, VC4 | 0 | $\mathrm{V}_{\text {SS }}$ | V |
|  |  | VC5 | 0 | 0.5 | V |
|  |  | ASRN, ASRP | -0.5 | 0.5 | V |
|  |  | PACK, PMS | 0 | 25 | V |
| $\mathrm{V}_{\text {(GPOD) }}$ | Output voltage range | GPOD | 0 | 25 | V |
| $\mathrm{I}_{\text {(GPOD) }}$ | Drain current ${ }^{(1)}$ | GPOD |  | 1 | mA |
| $\mathrm{C}_{\text {(REG25) }}$ | 2.5V LDO capacitor | REG25 | 1 |  | $\mu \mathrm{F}$ |
| $\mathrm{C}_{\text {(REG33) }}$ | 3.3V LDO capacitor | REG33 | 2.2 |  | $\mu \mathrm{F}$ |
| $\mathrm{C}_{\text {(VCELL+) }}$ | Cell voltage output capacitor | VCELL+ | 0.1 |  | $\mu \mathrm{F}$ |
| $\mathrm{R}_{\text {(PACK) }}$ | PACK input block resistor ${ }^{(2)}$ | PACK | 1 |  | k $\Omega$ |

(1) Use an external resistor to limit the current to GPOD to 1 mA in high voltage application.
(2) Use an external resistor to limit the inrush current PACK pin required.

## ELECTRICAL CHARACTERISTICS

Over operating free-air temperature range (unless otherwise noted), $\mathrm{T}_{\mathrm{A}}=-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}, \mathrm{V}_{\text {(REG25) }}=2.41 \mathrm{~V}$ to 2.59 V , $\mathrm{V}_{(\mathrm{BAT})}=14 \mathrm{~V}, \mathrm{C}_{\text {(REG25) }}=1 \mu \mathrm{~F}, \mathrm{C}_{\text {(REG33) }}=2.2 \mu \mathrm{~F}$; typical values at $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$ (unless otherwise noted)

|  | PARAMETER | TEST CONDITIONS | MIN TYP | MAX | UNIT |
| :---: | :---: | :---: | :---: | :---: | :---: |

| t(LOW:MEXT) | Cumulative clock low master extend time (see Figure 1) | See ${ }^{(4)}$ |  | 10 | ms |
| $\mathrm{t}_{\mathrm{f}}$ | Clock/data fall time | See ${ }^{(5)}$ |  | 300 | ns |
| $\mathrm{t}_{\mathrm{r}}$ | Clock/data rise time | See ${ }^{(6)}$ |  | 1000 | ns |

(1) The bq20z65-R1 times out when any clock low exceeds $t_{\text {(TIMEOUT) }}$.
(2) $t_{(H I G H)}$, Max, is the minimum bus idle time. $S M B C=S M B D=1$ for $t>50 \mathrm{~ms}$ causes reset of any transaction involving bq20z65-R1 that is in progress. This specification is valid when the NC_SMB control bit remains in the default cleared state (CLK[0]=0).
(3) $t_{\text {(LOW:SEXT) }}$ is the cumulative time a slave device is allowed to extend the clock cycles in one message from initial start to the stop.
(4) $t_{\text {(LOW:MEXT) }}$ is the cumulative time a master device is allowed to extend the clock cycles in one message from initial start to the stop.
(5) Rise time $\mathrm{t}_{\mathrm{r}}=$ VILMAX -0.15 ) to (VIHMIN +0.15 )
(6) Fall time $t_{f}=0.9 \mathrm{~V}_{\mathrm{DD}}$ to (VILMAX -0.15$)$

Start and Stop condition

Timeout condition

Wait and Hold condition

Repeated Start condition
A. SCLKACK is the acknowledge-related clock pulse generated by the master.

Figure 1. SMBus Timing Diagram

## FEATURE SET

## Primary (1st Level) Safety Features

The bq20z65-R1 supports a wide range of battery and system protection features that can easily be configured. The primary safety features include:

- Cell over/undervoltage protection
- Charge and discharge overcurrent
- Short Circuit protection
- Charge and discharge overtemperature with independent alarms and thresholds for each thermistor
- AFE Watchdog

## Secondary (2nd Level) Safety Features

The secondary safety features of the bq20z65-R1 can be used to indicate more serious faults via the SAFE pin. This pin can be used to blow an in-line fuse to permanently disable the battery pack from charging or discharging. The secondary safety protection features include:

- Safety overvoltage
- Safety undervoltage
- 2nd level protection IC input
- Safety overcurrent in charge and discharge
- Safety over-temperature in charge and discharge with independent alarms and thresholds for each thermistor
- Charge FET and zero-volt charge FET fault
- Discharge FET fault
- Cell imbalance detection (active and at rest)
- Open thermistor detection
- Fuse blow detection
- AFE communication fault

## Charge Control Features

The bq20z65-R1 charge control features include:

- Supports JEITA temperature ranges. Reports charging voltage and charging current according to the active temperature range.
- Handles more complex charging profiles. Allows for splitting the standard temperature range into 2 sub-ranges and allows for varying the charging current according to the cell voltage.
- Reports the appropriate charging current needed for constant current charging and the appropriate charging voltage needed for constant voltage charging to a smart charger using SMBus broadcasts.
- Determines the chemical state of charge of each battery cell using Impedance Track ${ }^{\text {TM }}$ and can reduce the charge difference of the battery cells in fully charged state of the battery pack gradually using cell balancing algorithm during charging. This prevents fully charged cells from overcharging and causing excessive degradation and also increases the usable pack energy by preventing premature charge termination
- Supports pre-charging/zero-volt charging
- Supports charge inhibit and charge suspend if battery pack temperature is out of temperature range
- Reports charging fault and also indicate charge status via charge and discharge alarms.

## Gas Gauging

The bq20z65-R1 uses the Impedance Track ${ }^{\text {TM }}$ Technology to measure and calculate the available charge in battery cells. The achievable accuracy is better than $1 \%$ error over the lifetime of the battery and there is no full charge discharge learning cycle required.
See Theory and Implementation of Impedance Track Battery Fuel-Gauging Algorithm application note (SLUA364) for further details.

## Lifetime Data Logging Features

The bq20z65-R1 offers lifetime data logging, where important measurements are stored for warranty and analysis purposes. The data monitored include:

- Lifetime maximum temperature
- Lifetime maximum temperature count
- Lifetime maximum temperature duration
- Lifetime minimum temperature
- Lifetime maximum battery cell voltage
- Lifetime maximum battery cell voltage count
- Lifetime maximum battery cell voltage duration
- Lifetime minimum battery cell voltage
- Lifetime maximum battery pack voltage
- Lifetime minimum battery pack voltage
- Lifetime maximum charge current
- Lifetime maximum discharge current
- Lifetime maximum charge power
- Lifetime maximum discharge power
- Lifetime maximum average discharge current
- Lifetime maximum average discharge power
- Lifetime average temperature

## Authentication

The bq20z65-R1 supports authentication by the host using SHA-1.

## Power Modes

The bq20z65-R1 supports 3 different power modes to reduce power consumption:

- In Normal Mode, the bq20z65-R1 performs measurements, calculations, protection decisions and data updates in 1 second intervals. Between these intervals, the bq20z65-R1 is in a reduced power stage.
- In Sleep Mode, the bq20z65-R1 performs measurements, calculations, protection decisions and data update in adjustable time intervals. Between these intervals, the bq20z65-R1 is in a reduced power stage. The bq20z65-R1 has a wake function that enables exit from Sleep mode, when current flow or failure is detected.
- In Shutdown Mode the bq20z65-R1 is completely disabled.

## CONFIGURATION

## Oscillator Function

The bq20z65-R1 fully integrates the system oscillators therefore, no external components are required for this feature.

## System Present Operation

The bq20z65-R1 periodically verifies the $\overline{\text { PRES }}$ pin and detects that the battery is present in the system via a low state on a PRES input. When this occurs, the bq20z65-R1 enters normal operating mode. When the pack is removed from the system and the PRES input is high, the bq20z65-R1 enters the battery-removed state, disabling the charge, discharge, and ZVCHG FETs. The $\overline{\text { PRES }}$ input is ignored and can be left floating when non-removal mode is set in the data flash.

## BATTERY PARAMETER MEASUREMENTS

The bq20z65-R1 uses an integrating delta-sigma analog-to-digital converter (ADC) for current measurement, and a second delta-sigma ADC for individual cell and battery voltage, and temperature measurement.

## Charge and Discharge Counting

The integrating delta-sigma ADC measures the charge/discharge flow of the battery by measuring the voltage drop across a small-value sense resistor between the SR1 and SR2 pins. The integrating ADC measures bipolar signals from -0.25 V to 0.25 V . The bq20z65-R1 detects charge activity when $\mathrm{V}_{\text {SR }}=\mathrm{V}_{\text {(SRP) }}-\mathrm{V}_{\text {(SRN }}$ is positive and discharge activity when $\mathrm{V}_{\text {SR }}=\mathrm{V}_{\text {(SRP) }}-\mathrm{V}_{\text {(SRN) }}$ is negative. The bq20z65-R1 continuously integrates the signal over time, using an internal counter. The fundamental rate of the counter is 0.65 nVh .

## Voltage

The bq20z65-R1 updates the individual series cell voltages at one second intervals. The internal ADC of the bq20z65-R1 measures the voltage, scales and calibrates it appropriately. This data is also used to calculate the impedance of the cell for the Impedance Track ${ }^{\text {TM }}$ gas-gauging.

## Current

The bq20z65-R1 uses the SRP and SRN inputs to measure and calculate the battery charge and discharge current using a $5 \mathrm{~m} \Omega$ to $20 \mathrm{~m} \Omega$ typ. sense resistor.

## Wake Function

The bq20z65-R1 can exit sleep mode, if enabled, by the presence of a programmable level of current signal across SRP and SRN.

## Auto Calibration

The bq20z65-R1 provides an auto-calibration feature to cancel the voltage offset error across SRN and SRP for maximum charge measurement accuracy. The bq20z65-R1 performs auto-calibration when the SMBus lines stay low continuously for a minimum of a programmable amount of time.

## Temperature

The bq20z65-R1 has an internal temperature sensor and 2 external temperature sensor inputs, TS1 and TS2, used in conjunction with two identical NTC thermistors (default are Semitec 103AT) to sense the battery environmental temperature. The bq20z65-R1 can be configured to use the internal temperature sensor or up to 2 external temperature sensors.

## COMMUNICATIONS

The bq20z65-R1 uses SMBus v1.1 with Master Mode and package error checking (PEC) options per the SBS specification.

## SMBus On and Off State

The bq20z65-R1 detects an SMBus off state when SMBC and SMBD are logic-low for $\geq 2$ seconds. Clearing this state requires either SMBC or SMBD to transition high. Within 1 ms , the communication bus is available.

## SBS Commands

Table 3. SBS COMMANDS
$\left.\begin{array}{|l|l|l|l|l|l|l|l|l|}\hline \begin{array}{l}\text { SBS } \\ \text { CMD }\end{array} & \text { MODE } & \text { NAME } & \text { FORMAT }\end{array} \begin{array}{l}\text { SIZE IN } \\ \text { BYTES }\end{array}, \begin{array}{l}\text { MIN } \\ \text { VALUE }\end{array}\right)$

APPLICATION SCHEMATIC

## PACKAGING INFORMATION

| Orderable Device | Status <br> (1) | Package Type | Package Drawing | Pins | Package Qty | Eco Plan <br> (2) | Lead/Ball Finish <br> (6) | MSL Peak Temp <br> (3) | Op Temp ( ${ }^{\circ} \mathrm{C}$ ) | Device Marking <br> (4/5) | Samples |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| BQ20Z65DBT-R1 | NRND | TSSOP | DBT | 44 | 40 | Green (RoHS \& no $\mathrm{Sb} / \mathrm{Br}$ ) | CU NIPDAU | Level-2-260C-1 YEAR | -40 to 85 | $20 Z 65$ |  |
| BQ20Z65DBTR-R1 | NRND | TSSOP | DBT | 44 | 2000 | Green (RoHS \& no $\mathrm{Sb} / \mathrm{Br}$ ) | CU NIPDAU | Level-2-260C-1 YEAR | -40 to 85 | $20 Z 65$ |  |

${ }^{(1)}$ The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.
${ }^{(2)}$ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS \& no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined
Pb -Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed $0.1 \%$ by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb -Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2 ) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS \& no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed $0.1 \%$ by weight in homogeneous material)
${ }^{(3)}$ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
${ }^{(4)}$ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
${ }^{(5)}$ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a " $\sim$ " will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
${ }^{(6)}$ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to Tl's terms and conditions of sale supplied at the time of order acknowledgment.
TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in Tl's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.
TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.
TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.
Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.
Resale of Tl components or services with statements different from or beyond the parameters stated by Tl for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.
In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, Tl's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.
No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.
Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have not been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.
TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
